- AI in Insurance
 - Customer Interaction
 - Health Insurance
 - Motor Insurance
- Changing work environment

AI Definition

Provides digital experiences with human-like qualities

Recognizes it's surroundings

Imitates cognitive functions

Learns from examples in data sets

writes programs by himself using examples

classifies, recommends, forecasts, groups, segments

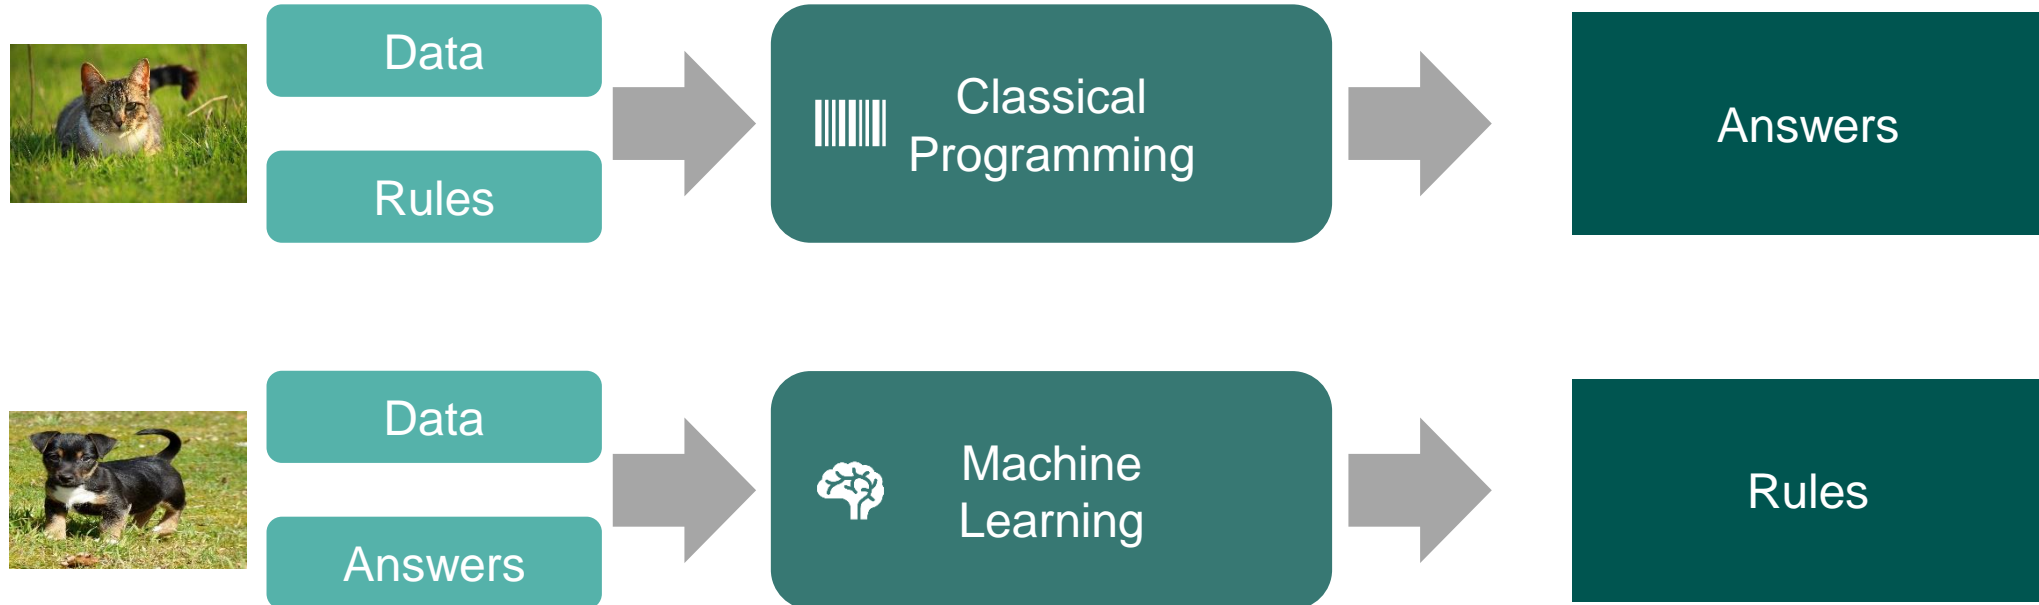

NARROW AI

Separate cognitive abilities, eyesight, natural language, recognition, reasoning

STRONG AI

combines weak AI with a consciousness or "mind"

ML Definition

Current developments: AI & ML Together

Bandwidth (Data Transfer) NETWORKING 15 GB outbound Transfer data inbound and outbound through our robust network of global data centers.	Computer Vision AI + MACHINE LEARNING 5,000 transactions S1 tier Extract rich information from images to categorize and process visual data.	Personalizer AI + MACHINE LEARNING 50,000 transactions S0 tier Deliver rich, personalized experiences for every user.
Translator AI + MACHINE LEARNING 2,000,000 characters S0 tier Add real-time, multi-language text translation to your apps, website, and tools.	Anomaly Detector AI + MACHINE LEARNING 20,000 transactions S0 tier Detect anomalies in data to quickly identify and troubleshoot issues.	Form Recognizer AI + MACHINE LEARNING 500 pages S0 tier Automate the extraction of text, key/value pairs, and tables from your documents.
Content Moderator AI + MACHINE LEARNING 10,000 transactions S0 tier Moderate text and images to provide a safer, more positive user experience.	Custom Vision AI + MACHINE LEARNING 10,000 predictions S0 tier Easily customize computer vision models for your unique use case.	Face AI + MACHINE LEARNING 30,000 transactions S0 tier Detect and identify people and emotions in images.
Ink Recognizer AI + MACHINE LEARNING 2,000 transactions S0 tier Recognize digital ink content, such as handwriting, shapes, and document layout.	Language Understanding AI + MACHINE LEARNING 10,000 text request transactions S0 tier Build natural language understanding into apps, bots, and IoT devices.	QnA Maker AI + MACHINE LEARNING 3 days S0 tier Create a conversational question-and-answer bot from your existing content.
Text Analytics AI + MACHINE LEARNING 5,000 transactions S tier Extract information such as sentiment, key phrases, named entities, and language from your text.

WEF: AI in financial services

7 Key Findings

- From Cost Center to Profit Center
- A new battlefield for customer loyalty
- Self driving finance
- Collective solutions for shared problems
- Uneasy data alliances
- The power of data regulators
- New ethical dilemmas

7 Key Impacts

- Modularized Operations as Service Operations
- Customized instead of Price, Speed & Access
- AI enabled Customer Services
- Prevent Fraud & ML across companies
- Partnership also with large Tech Companies
- A digital ID will be required for everyone
- Safety vs. Ease of Use vs. Coop with others

WEF – 5 AI strategies for insurance

Streamline Operations
to win on price

e.g. use natural language processing and advanced decision trees to improve underwriting and capital efficiency

Develop a different
claims experience

e.g. use image recognitions and fraud detection to speed up claims processing

Improve and expand
distribution strategies

e.g. use predictive analytics and new data sources to improve sales efficiency and expand into new markets

Insure against new types
of risk in new ways

e.g. use alternative data and dynamic behavioural pricing to develop unique Insurance products that cover new risk categories

Offer add-on services that
complement insurance

e.g. use real-time monitoring to advise clients on risk exposure strategies to lower risk

Transforming customer
interaction

Transforming operating
model

AI for Customer Interaction

Typical scenario

-  Contextualised knowledge
-  Instant recommendations
-  Self-supervised automation
-  CRM enrichment
-  Insights for empathy
-  Unsupervised learning
-  Contract & Claim closing automation

- Process automation in almost every area
- Identification of customer requirements
- Individualized mass communication

Health – endless opportunities for AI

Typical scenario

-  Picture analysis (disease recognition)
-  IOT device health supported fitness
-  Doctor as an app
-  Genomic screening & health plan development
-  Health screening from electronic records
-  Workforce monitoring platform
-  Global scaling disease control

AI & ML will have an impact in nearly every scenario thinkable in health

AI for a differentiated claim experience

FASTER

Improve Service
Real time Interaction,
Pictures, video, mail, data

MORE SECURE

Reduce Fraud
Interaction, Pictures, video,
mail, data, relations

P&C example Motor - Tesla

Elon Musk says Tesla is creating a 'major insurance company' after its botched rollout in California last year

Tyler Sonnemaker and Graham Rapier Jul 23, 2020, 4:32 PM

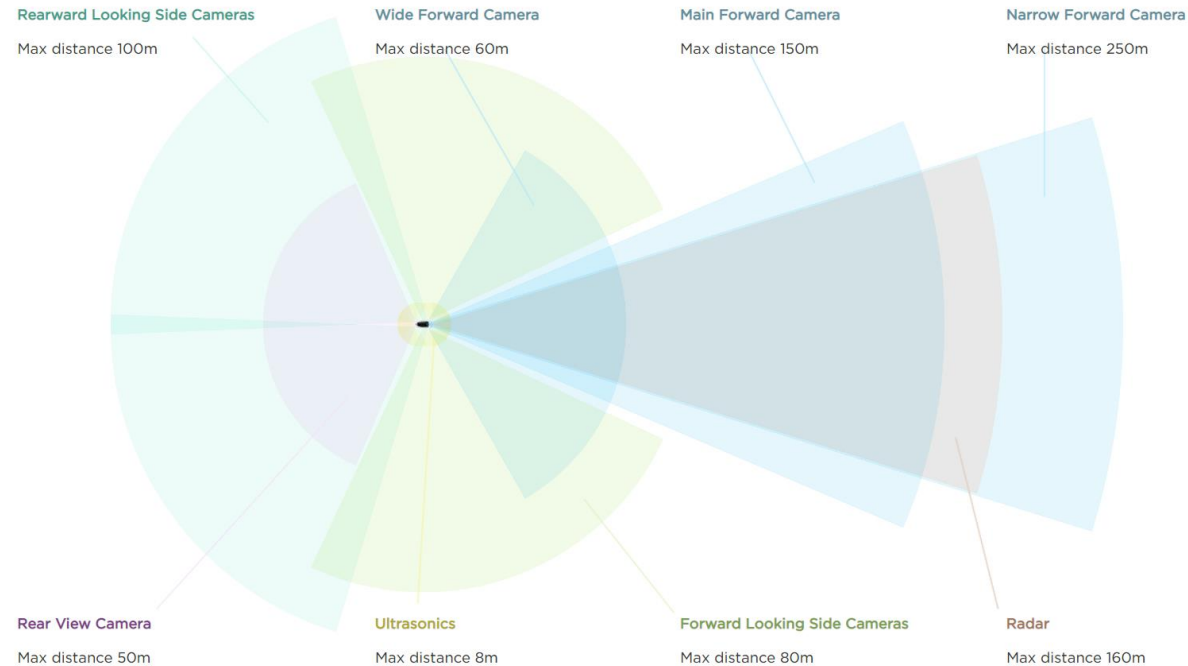

Elon Musk said Tesla wanted to use drivers' data to determine their insurance rates. Getty/Justin Sullivan

Source: www.tesla.com

1 accident per 4.53 ml miles with autopilot
vs.
1 accident per 1.56 ml. miles without active safety features
vs.
1 accident per 479k miles in US in general

P&C example Motor - Tesla

Advanced Sensor coverage
8 surround cameras
250m range
12 ultrasonic sensors
Forward-facing radar

Increased Processing Power
(40 x vs. previous version)

And - If everything else fails...

Tesla Invites Actuaries to Help It Create a 'Revolutionary' Insurance Company

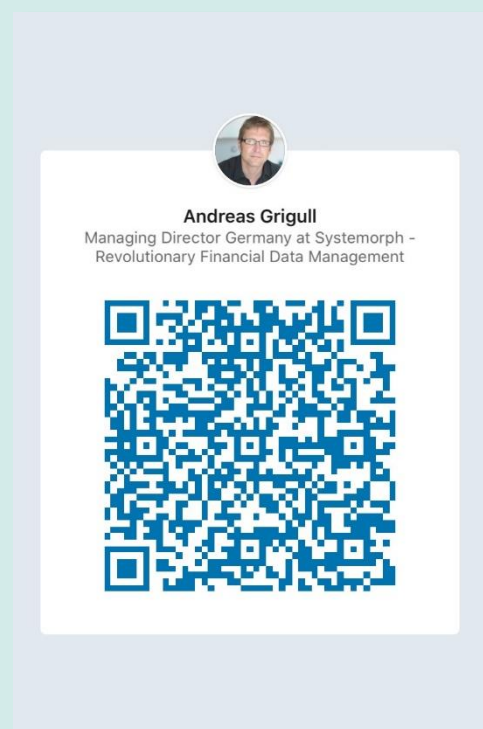

By Andrew G. Simpson | July 24, 2020

Source: Insurance journal, July 24th, 2020

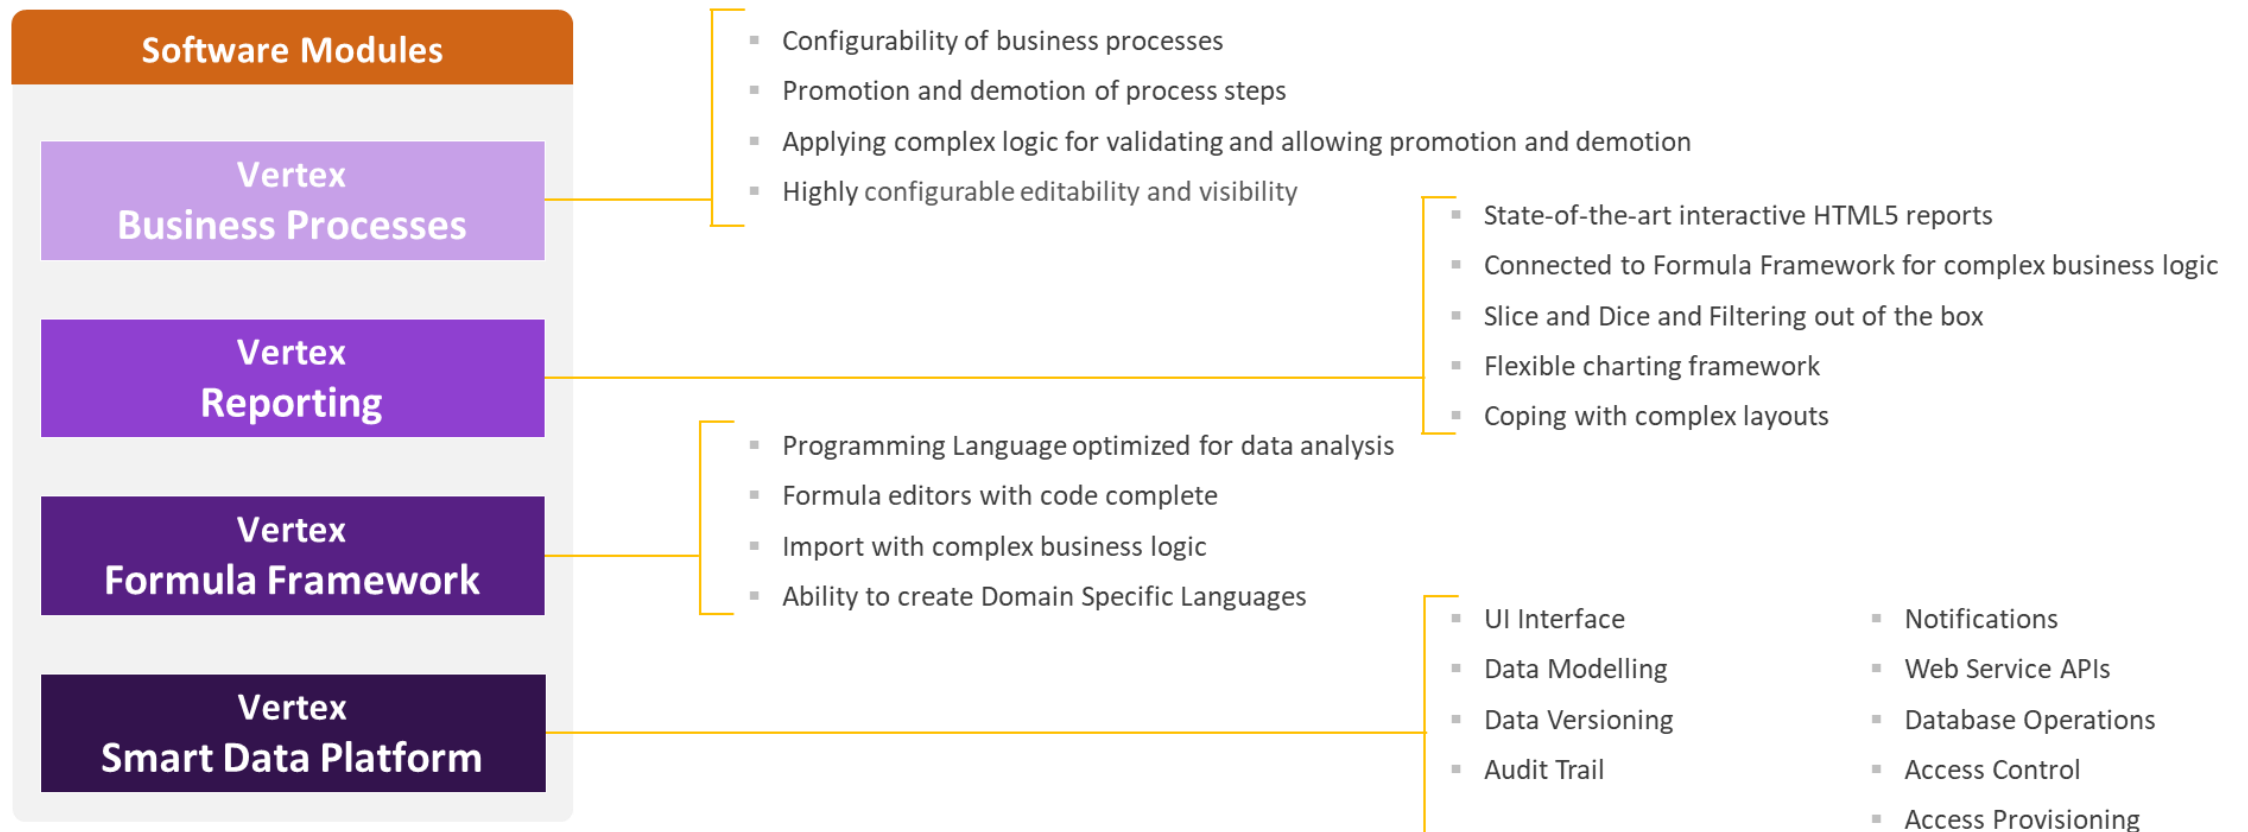

"I would love to have some high energy actuaries, especially. I have great respect for the actuarial profession. You guys are great at math. **Please join Tesla**, especially if you want to change things and you're annoyed by how slow the industry is. This is the place to be. We want revolutionary actuaries,"

Thank you very much for your attention!

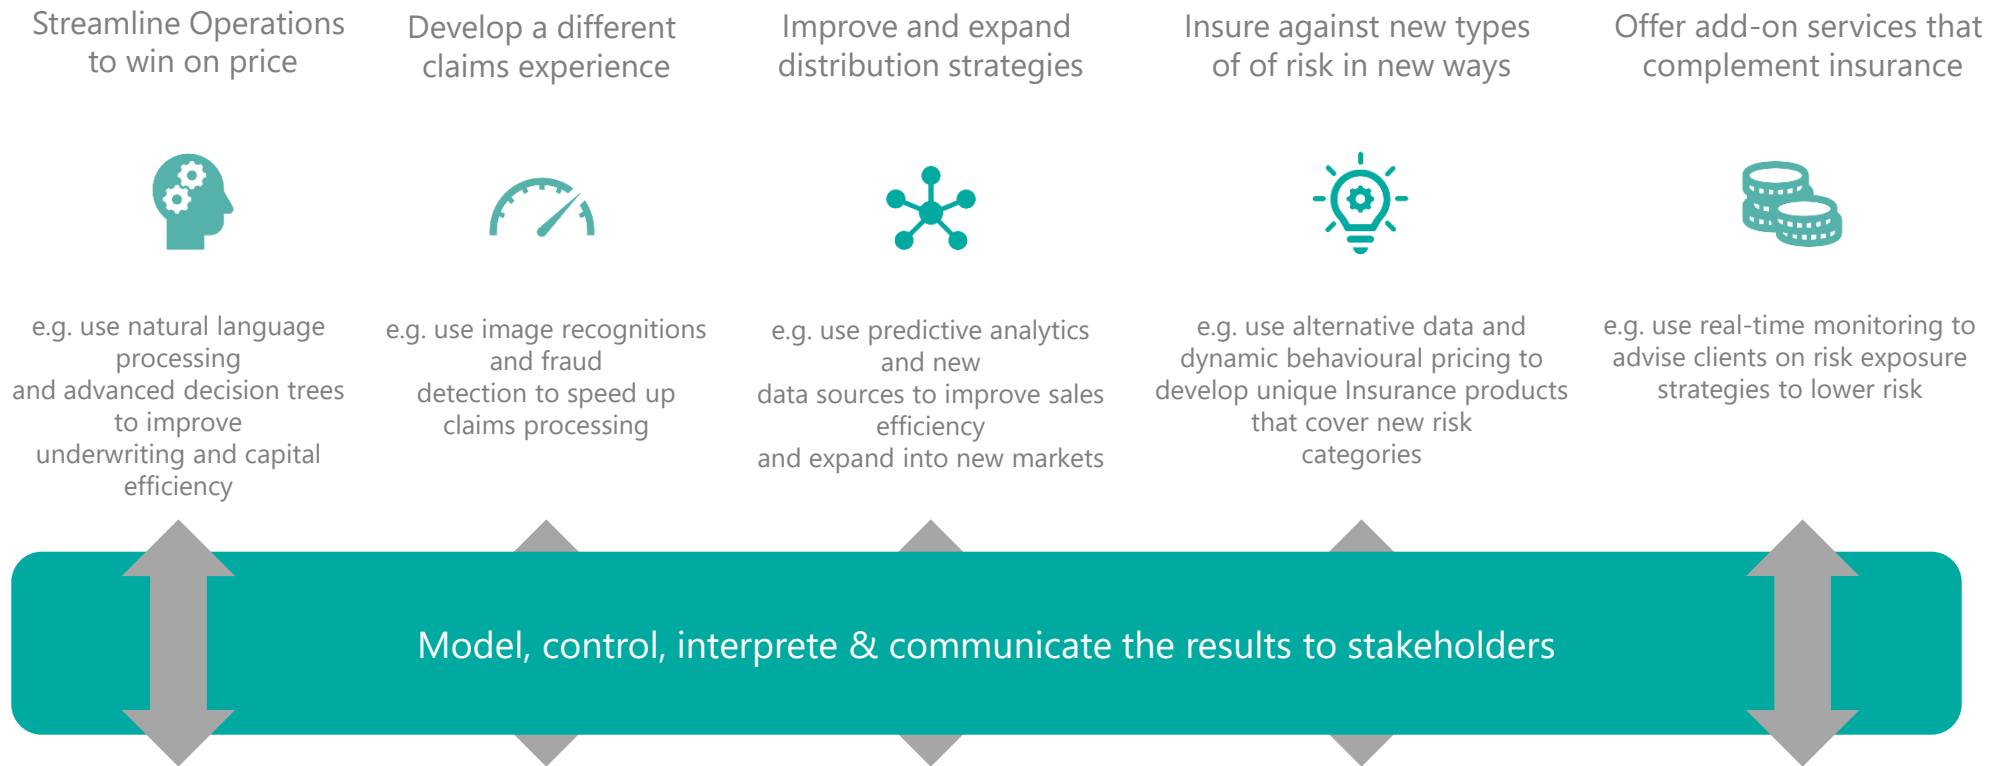

Systemorph – Vertex platform

Vertex is engineered for heavy duty enterprise data management, computations, financial reporting, workflows and process automation. It uses various standard interfaces to have it seamlessly integrated into existing IT landscapes. It is designed by actuaries, insurance and IT professionals over the course of almost 10 years.
